College of Medicine

OFFICE OF MEDICAL STUDENT RESEARCH EDUCATION

TAMU MSRPP Research Testimonials

MSRPP exactly aligned with my interests, and allowed me to demonstrate leadership for my CV while still engaged in scientific research like through poster presentations. - M1 Student

It has benefited me in terms of making connections with researchers and mentors. Furthermore, it has made the world of medical research less intimidating, and I feel as though it is a field in which I can try and find a place. - M1 Student

MSRPP has given me the ability to write papers, conduct research, and gain hands on experience. - M1 Student

It lead me to a defined leadership role in a team setting..., developed team working skills, and gain tremendous knowledge outside the field of medicine, including engineering design, 3D modeling, prototyping, business market analysis and pitch presentation. - M2 Student

MSRPP is designed for medical students to gain hands-on scholarly research experience. Through participation in either **non credit or credit pathways**, students learn to develop critical thinking and reasoning skills for prevention, diagnosis, and treatment.
